## Error after installing BlogSidebar

Posted by - 2006/06/09 15:43

---

Hello,

I installed mod\_sidebar2.5.0.zip and com\_blogsidebar2.4.zip in joomla 1.0.9. When i publish the sidebar i get this error messages:

Warning: main(/usr/home/marja/public\_html/components/com\_mamblog/configuration.php): failed to open stream: No such file or directory in /usr/home/marja/public\_html/modules/mod\_sidebar.php on line 51

Warning: main(): Failed opening '/usr/home/marja/public\_html/components/com\_mamblog/configuration.php' for inclusion (include\_path=.::/usr/lib/php:/usr/local/lib/php) in /usr/home/marja/public\_html/modules/mod\_sidebar.php on line 51

Warning: main(/usr/home/marja/public\_html/components/com\_mamblog/configuration.php): failed to open stream: No such file or directory in /usr/home/marja/public\_html/modules/mod\_sidebar.php on line 52

Warning: main(/usr/home/marja/public\_html/components/com\_mamblog/configuration.php): failed to open stream: No such file or directory in /usr/home/marja/public\_html/modules/mod\_sidebar.php on line 52

Fatal error: main(): Failed opening required '/usr/home/marja/public\_html/components/com\_mamblog/configuration.php' (include\_path=.::/usr/lib/php:/usr/local/lib/php) in /usr/home/marja/public\_html/modules/mod\_sidebar.php on line 52

Its correct i have not installed mamblog. So the configuraton file isnt there. BUT blogsidebar "Supports JoomBlog, Mamblog, and any Section for that matter". I use the standard "blog" function in joomla. Why isnt it working? Do i really need to install mamblog?

Thx,  
David

---

## Default mode is mamblog

Posted by SVTechie - 2006/06/09 15:51

---

If you do not configure section in it, BlogSidebar comes up in Mamblog mode and detects appropriate Mamblog section.

U have to configure the section ID by using BlogSidebar Module Admin.

---

It's working! Thank you.

---

## SAME PROBLEM

Posted by - 2006/06/19 19:15

---

i'm having the same problem. I have joomblog installed. I created a section and used the section id in the sidebar module, but I'm still getting the same error. what am I doing wrong?

---

## got it working

---

Posted by - 2006/06/19 19:29

I got it working with a newer version of sidebar. Now, I'm getting this error: Invalid query: Whole query: SELECT id FROM #\_\_categories WHERE section="com\_weblinks" AND title=""

---

## Blogroll

Posted by SVTechie - 2006/06/19 20:04

Please disable blogroll or properly configure weblink category to be used for blogroll.

---

## Re: Blogroll

Posted by - 2006/08/25 00:09

Please disable blogroll or properly configure weblink category to be used for blogroll.

Ok so where do I find instructions on how to configure weblink category?

---

## Weblink

Posted by SVTechie - 2006/08/25 07:28

Go to Admin Panel -> Components -> Weblinks -> Weblink Categories.

Add blogroll as new category.

Alternatively, to use existing Weblink Category (for example, <xxx>),

Go to Admin Panel -> Modules -> Site Modules

Click on BlogSidebar, In the parameters section, search for blogroll/Weblink Category. Replace "blogroll" with <xxx>.

## Re: Error after installing BlogSidebar

Posted by - 2006/09/02 10:55

I just installed the latest component and module and am getting the errors described elsewhere with no fixes. I am using Joomla 1.0.10 . When I install I'm told that there is no configuration required. Now I see there is - I'm very confused. Do you have a manual of some sort that clearly documents how to use this?

BTW, what is the archive you've got listed by month? That's great!

Warning: main(/home/xxxxx/public\_html/components/com\_mamblog/configuration.php): failed to open stream: No such file or directory in /home/xxxxx/public\_html/modules/mod\_sidebar.php on line 51

Warning: main(): Failed opening '/home/xxxxx/public\_html/components/com\_mamblog/configuration.php' for inclusion (include\_path=/home/xxxxx/public\_html/administrator/components/com\_sef:/home/xxxxx/public\_html/administrator/components/com\_sef/includes:./usr/lib/php:/usr/local/lib/php) in /home/xxxxx/public\_html/modules/mod\_sidebar.php on line 51

Warning: main(/home/xxxxx/public\_html/components/com\_mamblog/configuration.php): failed to open stream: No such file or directory in /home/xxxxx/public\_html/modules/mod\_sidebar.php on line 52

Warning: main(/home/xxxxx/public\_html/components/com\_mamblog/configuration.php): failed to open stream: No such file or directory in /home/xxxxx/public\_html/modules/mod\_sidebar.php on line 52

---

Fatal error: main(): Failed opening required '/home/xxxxx/public\_html/components/com\_mamblog/configuration.php' (include\_path=/home/xxxxx/public\_html/administrator/components/com\_sef:/home/xxxxx/public\_html/administrator/components/com\_sef/includes:./usr/lib/php:/usr/local/lib/php) in /home/xxxxx/public\_html/modules/mod\_sidebar.php on line 52

=====

## Answer to this is already posted

Posted by SVTechie - 2006/09/04 08:55

---

### 1. About configuration requirements...

There is no configuration requirement for BlogSidebar Component  
BlogSidebar Module must be configured

2. As stated in the beginning of this topic, this problem is discussed and resolution is posted. Infact, this problem is already discussed multiple times..

3. For month based archive, please use Joomla! module mod\_archive.

Thanks

---

Discussed multiple times, but still clear as mud.

If I remove the physical objects from the file structure after deleting them in joomla, can I reliably get back to where I was before I started with this install? The rest of the joomla install and setup was a snap compared to this.

To reiterate an earlier question: is there a single point of documentation that could step a qualified, experienced technical person thru the install - making no assumptions of knowledge of the internals of the processing and/or programming?

My goal is to get something that I can present to a client - not to learn PHP.

A simple step-by-step document, like a README or something would be nice to accompany the zip files.

## Re: Weblink

Posted by - 2008/03/05 11:03

---

Go to Admin Panel -> Components -> Weblinks -> Weblink Categories.

Add blogroll as new category.

Alternatively, to use existing Weblink Category (for example, <xxx>),

Go to Admin Panel -> Modules -> Site Modules

Click on BlogSidebar, In the parameters section, search for blogroll/Weblink Category. Replace "blogroll" with <xxx>.

First I got the same SQL error as stated before by davidlokl and vnative.

Then I added "blogroll" in Weblinks Category, as it was written by you.. After that I searched in bolgsidebar module the field "weblink category to use" and I wrote "blogroll" in it.

But now I get a new error at my blogroll module position, although I made it like you wrote here:

"Invalid query: Whole query: SELECT title, url FROM #\_\_weblinks WHERE catid=161 AND published = 1"

---

I would appreciate, if you may help me with this matter. :-)
